

Carl-Gustaf M3

The best there is

There's no other system like the Carl-Gustaf. It's true multi-role man-portable artillery and with it you can defeat any MBT or AFV equipped with the latest advances in armour protection, destroy landing craft and bunkers, blast a man-size hole through brick and concrete walls, knock out concealed troops, send out a smoke screen and even turn night into day. With a Carl-Gustaf and its family of ammunition the infantryman in the heat of battle can quickly respond to any ground threat.

As armour protection continues to improve Saab Bofors Dynamics continues to develop armour-piercing ammunition. The latest can penetrate the main armour of an advanced

MBT, exceeding 500 mm, after first destroying the ERA protection and devastate the interior with highly effective behind armour effect.

In action the Carl-Gustaf is handled like a modern assault rifle. It is also light (about 10 kg) as it is constructed of new materials. The thin steel liner that makes up the barrel is wound round with glass fibre and carbon fibre laminate and many of the external parts are made of aluminium or plastic. Every part of the weapon has been carefully thought out. The grips are hand-adapted, there's a foolproof loading and mechanical firing mechanism to reduce stress in combat. And even when wearing Arctic or NBC equipment it is easy to load and handle.

SAAB

The Carl-Gustaf is fitted with permanent front and rear open sights that can be set for ranges from 50 to 900 metres. But to increase the level of accuracy there is a telescopic sight. This is the sight that is normally used. It has a field of view of 12°, a magnification of X3 and built in temperature correction.

With its low weight, easy handling, short length, ruggedized design and ammunition for almost every type of target the Carl-Gustaf is the weapon for any combat environment from fighting in built up areas to the fragmented battlefield. It is also the weapon to safeguard the success of peacekeeping and international operations.

Technical Data

Carl-Gustaf M3

Weapon

length	1065 mm
weight	10 kg
mount	0.5 kg
packed with accessories	30 kg
