

# Sub-Calibre Adapter 553B

Low-cost and effective training

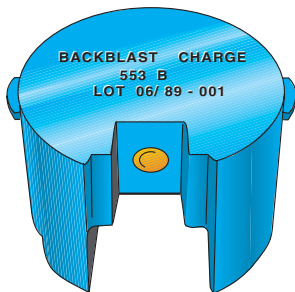

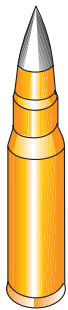

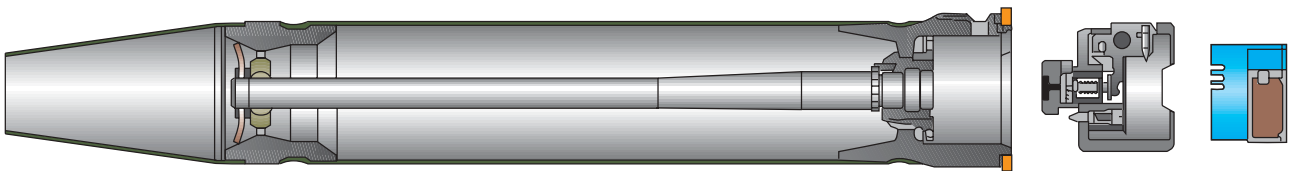

With the 553B Sub-Calibre Adapter inserted into the Carl-Gustaf it is possible to raise the level of proficiency and reduce training costs to a low level both at the firing range and on the training ground.

This is achieved by using 7.62 mm tracer ammunition with the Sub-Calibre Adapter. The 7.62 mm round has almost the same trajectory as the HEAT 551. The situation can be made more realistic by fitting a backblast charge to the adapter to provide smoke, sound and wave pressure effects.

When the Sub-Calibre Adapter is loaded with a 7.62 round, with or without a backblast charge, it is handled in exactly the same way as standard 84 mm ammunition.
