

SpecterOS3.2

SIGNIFICANTLY IMPROVES HIT PERFORMANCE

ELCAN Optical Technologies (A Raytheon Company) is pushing the envelope of optical and digital technologies to lead the future of man-portable sighting systems. By merging experience, innovation and customer focus we are developing new Specter sights that provide optimum capabilities/weight performance and that are critical elements in the evolution of future soldier systems. Whether the mission need is for close combat optical, night vision, thermal, digital, or multi-role...all Specter sights are rugged, reliable and deliver superior accuracy.

The ELCAN Optical Sight has been developed by ELCAN Optical Technologies to be the primary sighting systems for a variety of small arms and significantly improves hit probability, particularly at longer ranges and in poor visibility. It also shortens target engagement times.

Verified in trials by both US and Canadian armies. The ELCAN is designed for use in all adverse weather conditions.

- Performance field proven by the Canadian Forces
- Fully shock protected optics
- Excellent optical performance
- Tritium illuminated reticle or LED battery powered
- A mount incorporating all ballistic corrections
- Rugged - designed for military use
